Work Experience

Jun 2025 - present

Web Developer

- Data Design

I work full-time as a Web Developer at Data Design, where I have built, developed and maintained a large number of e-commerce stores and business web applications. A few of the projects I worked on, among many others:

- **TiramisuERP** – I actively develop and maintain this large, multi-module ERP system (React, TypeScript, TanStack Router & Query, Zustand, AG-Grid Enterprise, React Hook Form & Zod). It covers sales, finance, warehouse, e-commerce, gastro/POS, personnel and mobile-sales modules, with internationalization, error monitoring (Sentry) and real-time updates.

- **Ksport** – a modern headless Next.js storefront for a sportswear retailer (React, TypeScript, TailwindCSS, TanStack Query), with product catalog, cart & checkout, online payment, wishlist, user accounts and store locator.

- **BusTicket** – an online bus-ticket booking platform built in Next.js with 15-language localization (next-intl), route search, online & offline payment, ticket history, bus rental and an integrated chatbot.

- **LevelUp** and **TimePlus** – e-commerce storefronts built on a custom PHP platform (product catalog, cart, wishlist, multi-language, blog, shipping and email/payment integrations), where I also handled UI redesigns.

Beyond these, I have developed and maintained many other e-commerce stores on the same custom PHP platform, handling new features, bug fixes, redesigns and day-to-day maintenance. I have also worked on developing and maintaining the e-commerce REST API (Laravel) that powers these storefronts, including new endpoints, bug fixes and performance improvements. Across these projects I use React.js, Next.js, TypeScript, Node.js, PHP / Laravel, TailwindCSS and SASS to deliver responsive, performant and maintainable solutions.

Nov 2023 - Jun 2025

Web Developer

- Freelance

I worked as a Web Developer on a freelance basis, designing and building responsive websites and web applications for government and private organizations. I delivered projects using HTML, CSS,

<> MongoDB

<> Git

JavaScript, React.js, Vue.js, Next.js, Node.js, SASS and TailwindCSS, handling everything from UI implementation to deployment.

Aug 2022 - Jul 2026

Software Engineer

- Radio i Televizija Crne Gore, RTCG

As a broadcast engineer at the national television station, I maintain complex systems, including Avid's MediaCentral, iNEWS, MediaComposer, Maestro, iNEWS Command, and Airspeed, essential for production, broadcasting, graphics, editing, archiving, material ingestion, and conversion. I also maintain the Yes system for broadcasting and recording by SiMedia. Additionally, I support employees in production, technical, and news departments, ensuring continuous and efficient operation of all processes.

I'm also involved in developing internal web applications for the organization, where I've developed strong skills in React, Node.js, and Vue.js. I worked here full-time until June 2026, then continued part-time until July 2026.

Sep 2021 - Jan 2022

Electrical Engineer

- Ramel

I worked at Ramel, a private company specializing in electrical installations and materials, where I designed high-voltage installations for buildings, households, and hangars. I also interpreted the project for the first section of the highway in Montenegro, creating AutoCAD sketches, extracting project information, and providing suggestions.

Education

2015 - 2020

Bachelor of Science in Electrical Engineering

- University of Montenegro, Faculty of Electrical Engineering

2011 - 2015

High School Diploma

- Gymnasium 'Slobodan Škerović'
